TABLE OF CONTENTS

PROJECT MAKING

The Project was a difficult ask. But we have managed to pull it out. It was quite a journey to finish this task up. Our website name is Coreo, a mixture of cocomo and oreo. It is an ecommerce website selling only products related to cocomo and oreo. Our website has a basic layout including home, products, contact and about page.

WHAT WAS EASY

Making a basic layout of HTML, CSS and JavaScript was easy. It was because, I have a little bit experience in HTML and CSS.

WHAT WAS DIFFICULT

Making JavaScript of Add to Cart features and Login and Sign-Up features because they were complex, and I have never done anything like this before.

WHAT WAS UNIQUE

Adding custom cursors, a special video for Intro, a one-time login and sign-up feature seems unique to me.

WHAT WE LEARNED

A little idea on how to make such complex websites having so many features and webpages. A little knowledge of php and json and how bigger companies uses databases to store data of their user. Overall, it was just a gain of experience in my HTML, CSS and JavaScript skills

FEATURES THAT WERE FULFILLED

- One-Time Login and Sign-Up System

- Add to Cart Features

- Check-out System

- Multiple Webpages

- Custom Cursors

- Videos

- Proper Transition

- Public Website.

FEATURES THAT WERE NOT FULFILLED

- Responsive Website (for mobile or smaller screen)
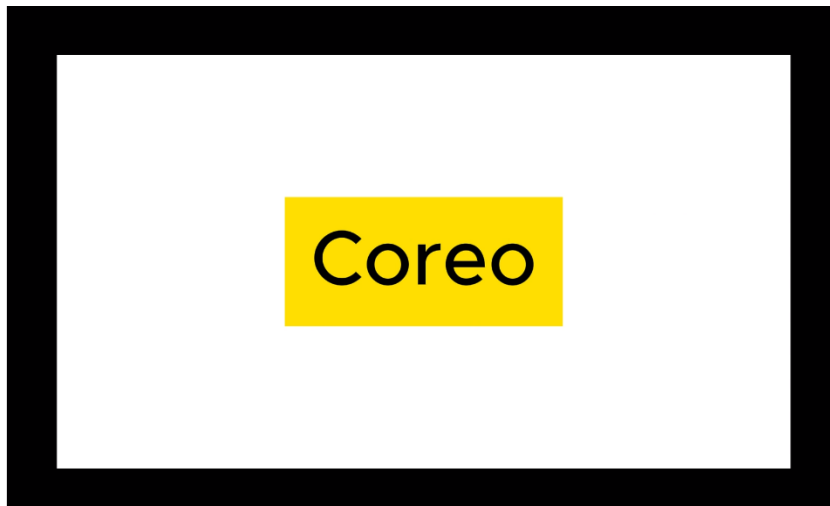

- No database.

DISTRIBUTION OF WORK

**Application Developer**   Muhammad Jibran
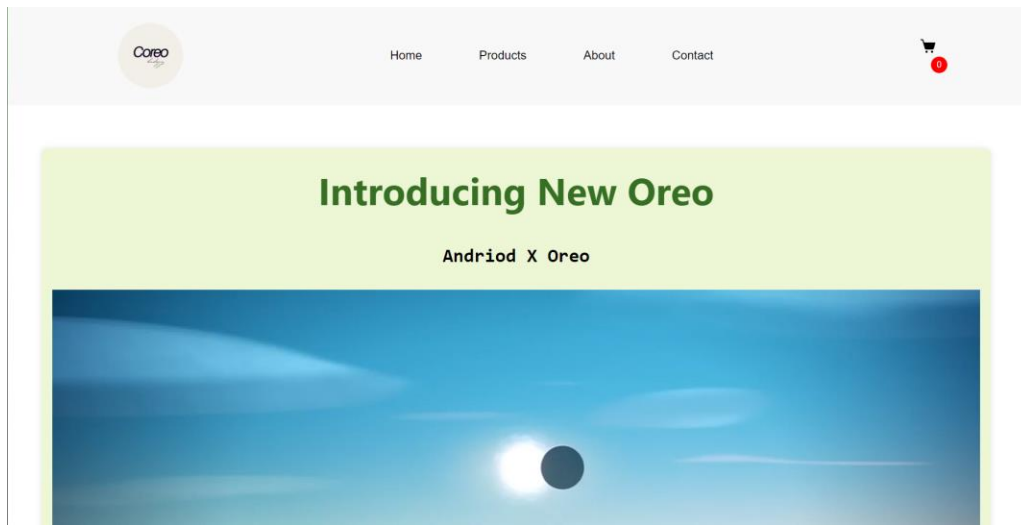

**Documentation Writer**   Abdul Rafay
